That too was an area of concern I had when the study was completed and I said we might have an oh shit moment. I will set up a call with her to discuss the results.

Nice!

The more I dig into this the more I'm confident that they won't see anything. I need to dig a little more into why they say some strange results with the blank and why they see an uptick at the solubility limit.

The data has not been graphed, I think they are running the luciferase on the ERTA. I should have preliminary data tomorrow for you (on first glance they look negative- but I need to graph to be sure).

CONFIDENTIAL

EASTMAN-031062

Attached is the final report for the extracts

Thanks
Colleen
